

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) A method comprising:
receiving customer information corresponding to a customer-provided wireless device from a party including one or more customers requesting services from a service establishment that provides services to customers within the service establishment;
generating service availability information corresponding to at least an estimated time until the requested services are available in response to receiving the customer information; and
providing, to a wireless service provider that provides wireless services to the customer-provided wireless device, the service availability information.
2. (Original) The method of claim 1 wherein the wireless device comprises one of: a cellular telephone, a pager, a personal digital assistant (PDA), a portable computer, a global positioning system (GPS) device, a watch, and a wireless electronic mail device.
3. (Original) The method of claim 1 wherein the service establishment comprises one of: a restaurant, a hair salon, an automobile service facility, an amusement park attraction, a spa, a bar, a club, a golf course and a bowling facility.

4. (Original) The method of claim 1 wherein the customer information comprises one or more of: a number of people in the party, a service preference and a wireless identifier.

5. (Original) The method of claim 4 wherein the wireless identifier comprises one of: a cellular telephone number, a pager number, a wireless device network address, a user identifier, a group identifier.

6. (Original) The method of claim 1 wherein the service availability information comprises one or more of: an estimated wait time, a distance between the service establishment and the wireless device, a service status, a location of the service establishment and a location of the wireless device.

7. (Previously Presented) An article comprising a computer-readable medium having stored thereon instructions that, when executed, cause one or more processors to:

receive customer information corresponding to a customer-provided wireless device from a party including one or more customers requesting services from a service establishment that provides services to customers within the service establishment;

generate service availability information corresponding to at least an estimated time until the requested services are available in response to receiving the customer information; and

provide, to a wireless service provider that provides wireless services to the customer-provided wireless device, the service availability information.

8. (Original) The article of claim 7 wherein the wireless device comprises one of: a cellular telephone, a pager, a personal digital assistant (PDA), a portable computer, a global positioning system (GPS) device, a watch, and a wireless electronic mail device.

9. (Original) The article of claim 7 wherein the service establishment comprises one of: a restaurant, a hair salon, an automobile service facility, an amusement park attraction, a spa, a bar, a club, a golf course and a bowling facility.

10. (Original) The article of claim 7 wherein the customer information comprises one or more of: a number of people in the party, a service preference and a wireless identifier.

11. (Original) The article of claim 10 wherein the wireless identifier comprises one of: a cellular telephone number, a pager number, a wireless device network address.

12. (Original) The article of claim 7 wherein the service availability information comprises one or more of: an estimated wait time, a distance between the

service establishment and the wireless device, a service status, a location of the service establishment and a location of the wireless device.

13. (Previously Presented) A system comprising:

 a memory controller;

 a device for accessing a computer-readable medium coupled with the memory controller; and

 an article comprising a computer-readable medium having stored thereon instructions that, when executed, cause one or more processors to receive customer information corresponding to a customer-provided wireless device from a party including one or more customers requesting services from a service establishment that provides services to customers within the service establishment, generate service availability information corresponding to at least an estimated time until the requested services are available in response to receiving the customer information, and provide, to a wireless service provider that provides wireless services to the customer-provided wireless device, the service availability information.

14. (Original) The system of claim 13 wherein the wireless device comprises one of: a cellular telephone, a pager, a personal digital assistant (PDA), a portable computer, a global positioning system (GPS) device, a watch, and a wireless electronic mail device.

15. (Original) The system of claim 13 wherein the service establishment comprises one of: a restaurant, a hair salon, an automobile service facility, an amusement park attraction, a spa, a bar, a club, a golf course and a bowling facility.

16. (Original) The system of claim 13 wherein the customer information comprises one or more of: a number of people in the party, a service preference and a wireless identifier.

17. (Original) The system of claim 16 wherein the wireless identifier comprises one of: a cellular telephone number, a pager number, a wireless device network address.

18. (Original) The system of claim 13 wherein the service availability information comprises one or more of: an estimated wait time, a distance between the service establishment and the wireless device, a service status, a location of the service establishment and a location of the wireless device.

19. (Previously Presented) A method comprising:
receiving customer information corresponding to a customer-provided wireless device from a party including one or more customers requesting services from a service establishment that provides services to customers within the service establishment;

generating service availability information corresponding to at least an estimated time until the requested services are available in response to receiving the customer information; and

providing, to the customer-provided wireless device, the service availability information.

20. (Original) The method of claim 19 wherein the wireless device comprises one of: a cellular telephone, a pager, a personal digital assistant (PDA), a portable computer, a global positioning system (GPS) device, a watch, and a wireless electronic mail device.

21. (Original) The method of claim 19 further comprising:
tracking a location of the wireless device;
determining a travel distance between the wireless device and the service establishment;
determining a time of travel corresponding to the distance between the wireless device and the service establishment;
comparing the time of travel with an estimated wait time from the service availability information; and
transmitting an alert message to the wireless device with the time of travel is within a pre-selected range of the estimated wait time.

22. (Original) The method of claim 21 wherein determining a time of travel corresponding to the distance between the wireless device and the service establishment comprises using an indication of traffic conditions and distance of travel to determine the time of travel.

23. (Original) The method of claim 19 wherein the service establishment comprises one of: a restaurant, a hair salon, an automobile service facility, an amusement park attraction, a spa, a bar, a club, a golf course and a bowling facility.

24. (Original) The method of claim 19 wherein the customer information comprises one or more of: a number of people in the party, a service preference and a wireless identifier.

25. (Original) The method of claim 24 wherein the wireless identifier comprises one of: a cellular telephone number, a pager number, a wireless device network address.

26. (Original) The method of claim 19 wherein the service availability information comprises one or more of: an estimated wait time, a distance between the service establishment and the wireless device, a service status, a location of the service establishment and a location of the wireless device.

27. (Original) The method of claim 19 further comprising:

tracking a location of the wireless device;
determining a travel distance between the wireless device and the service establishment;
determining a time of travel corresponding to the distance between the wireless device and the service establishment;
comparing the time of travel with an estimated wait time from the service availability information; and
modifying the customer information if the time of travel exceeds the estimated wait time.

28. (Original) The method of claim 27 wherein determining a time of travel corresponding to the distance between the wireless device and the service establishment comprises using an indication of traffic conditions and distance of travel to determine the time of travel.

29. (Previously Presented) An article comprising a computer-readable medium having stored thereon instructions that, when executed, cause one or more processors to:
receive customer information corresponding to a customer-provided wireless device from a party including one or more customers requesting services from a service establishment that provides services to customers within the service establishment;

generate service availability information corresponding to at least an estimated time until the requested services are available in response to receiving the customer information; and

provide, to the customer-provided wireless device, the service availability information.

30. (Original) The article of claim 29 wherein the wireless device comprises one of: a cellular telephone, a pager, a personal digital assistant (PDA), a portable computer, a global positioning system (GPS) device, a watch, and a wireless electronic mail device.

31. (Original) The article of claim 29 further comprising instructions that, when executed, cause the one or more processors to:

track a location of the wireless device;
determine a travel distance between the wireless device and the service establishment;
determine a time of travel corresponding to the distance between the wireless device and the service establishment;
compare the time of travel with an estimated wait time from the service availability information; and
transmit an alert message to the wireless device with the time of travel is within a pre-selected range of the estimated wait time.

32. (Original) The article of claim 31 wherein the instructions that cause the one or more processors to determine a time of travel corresponding to the distance between the wireless device and the service establishment comprise instructions that, when executed, cause the one or more processors to use an indication of traffic conditions and distance of travel to determine the time of travel

33. (Original) The article of claim 29 wherein the service establishment comprises one of: a restaurant, a hair salon, an automobile service facility, an amusement park attraction, a spa, a bar, a club, a golf course and a bowling facility.

34. (Original) The article of claim 29 wherein the customer information comprises one or more of: a number of people in the party, a service preference and a wireless identifier.

35. (Original) The article of claim 33 wherein the wireless identifier comprises one of: a cellular telephone number, a pager number, a wireless device network address, a user identifier, a group identifier.

36. (Original) The article of claim 29 wherein the service availability information comprises one or more of: an estimated wait time, a distance between the service establishment and the wireless device, a service status, a location of the service establishment and a location of the wireless device.

37. (Original) The article of claim 29 further comprising instructions that, when executed, cause the one or more processors to:

track a location of the wireless device;
determine a travel distance between the wireless device and the service establishment;
determine a time of travel corresponding to the distance between the wireless device and the service establishment;
compare the time of travel with an estimated wait time from the service availability information; and
modify the customer information if the time of travel exceeds the estimated wait time.

38. (Original) The article of claim 31 wherein the instructions that cause the one or more processors to determine a time of travel corresponding to the distance between the wireless device and the service establishment comprise instructions that, when executed, cause the one or more processors to use an indication of traffic conditions and distance of travel to determine the time of travel

39. (Previously Presented) A system comprising:
one or more substantially omnidirectional antenna(e);
a device for accessing a computer-readable medium coupled with the memory controller; and

a computer-readable medium having stored thereon instructions that, when executed, cause one or more processors to receive customer information corresponding to a customer-provided wireless device from a party including one or more customers requesting services from a service establishment that provides services to customers within the service establishment, generate service availability information corresponding to at least an estimated time until the requested services are available in response to receiving the customer information, and provide, to the customer-provided wireless device, the service availability information.

40. (Original) The system of claim 39 wherein the wireless device comprises one of: a cellular telephone, a pager, a personal digital assistant (PDA), a portable computer, a global positioning system (GPS) device, a watch, and a wireless electronic mail device.

41. (Original) The system of claim 39 wherein the computer-readable medium further comprising instructions that, when executed, cause the one or more processors to track a location of the wireless device, determine a travel distance between the wireless device and the service establishment, determine a time of travel corresponding to the distance between the wireless device and the service establishment, compare the time of travel with an estimated wait time from the service availability information, and transmit an alert message to the wireless device with the time of travel is within a pre-selected range of the estimated wait time.

42. (Original) The system of claim 39 wherein the service establishment comprises one of: a restaurant, a hair salon, an automobile service facility, an amusement park attraction, a spa, a bar, a club, a golf course and a bowling facility.

43. (Original) The system of claim 39 wherein the customer information comprises one or more of: a number of people in the party, a service preference and a wireless identifier.

44. (Original) The system of claim 39 wherein the wireless identifier comprises one of: a cellular telephone number, a pager number, a wireless device network address.

45. (Original) The system of claim 39 wherein the service availability information comprises one or more of: an estimated wait time, a distance between the service establishment and the wireless device, a service status, a location of the service establishment and a location of the wireless device.

46. (Original) The system of claim 39 wherein the computer-readable medium further comprising instructions that, when executed, cause the one or more processors to track a location of the wireless device, determine a travel distance between the wireless device and the service establishment, determine a time of travel corresponding to the distance between the wireless device and the service establishment, compare the time of travel with an estimated wait time from the service availability

information, and modify the customer information if the time of travel exceeds the estimated wait time.
